

Swedish Biomimetics 3000® AB

PRESS RELEASE

UK, 31 March 2015

Relocation of Swedish Biomimetics 3000® Ltd to Norwich, UK

SB3000® is pleased to announce the relocation of its UK Research, Development and Commercialisation facility from Oxford to Norwich. As of 01 April 2015, the new address will be:

Swedish Biomimetics® 3000 Ltd
Hethel Engineering Centre
Chapman Way
Hethel
Norwich
NR14 8FB
United Kingdom
Tel: +44 (0)1953 425121

As part of the Hethel Engineering Centre, the new facility is ideally equipped to support the future research and development needs of the company, which is now entering into the maturation of its technologies and coming closer to its commercial phase. Commenting on the move, Dr Andrew J Copestake, CEO of SB3000® said,

"This move allows us to take advantage of Norwich's strong talent pool and cost-effective environment to continue the development of current platform technologies, μ LOT® and μ Mist®. The new, larger facility is close to potential major industrial partners, the University of East Anglia and its Medical School, prestigious Cambridge close by and other leading research centres in the area."

Swedish Biomimetics 3000® AB, Stockholm, Sweden, was formed in 2004. SB3000® AB takes inspiration from nature (biomimetics) for sources of new patentable intellectual property which can be developed into radical, disruptive technologies with commercially viable industrial applications.

In 2007, Swedish Biomimetics 3000® AB formed a fully owned UK subsidiary, Swedish Biomimetics 3000® Ltd, to invest into the development and commercialization of two biomimetically inspired platform technologies; μ LOT® and μ MIST®.

SB3000® AB's mission is to establish and nurture technology specific SPEs (special purpose entities) engaged in the development of Intellectual Property ("IP") derived from biomimetic concepts. IP generated from these SPEs is commercialized through multiple avenues which include product sales, royalty revenues, share liquidity derived from IPOs or through SPE divestments.
